BABYSTEPS · PROJECT DOCUMENT

Growth plan

How BabySteps could find its first families and keep them. Every target is a proposal until the app has real usage data.

PROJECT	PREPARED BY	VERSION
BabySteps	Aditi Kela, product lead	1.0, draft for review

DATE

October 15, 2026

CONFIRMED from the built app or from you ESTIMATE my working figure

PROPOSED a plan or target to test SOURCED from a cited public page TO CONFIRM needs your input

> The app has no usage baseline in this document. Targets below are proposals to test, not forecasts. TO CONFIRM

Position and audience

- Position: the baby app that fits the country you live in. PROPOSED
- First audience: first-time parents in the US and India, plus parents living away from their home country. PROPOSED
- Secondary audience: grandparents and partners who contribute to a shared time capsule. PROPOSED

North Star metric

Weekly active families: families who log at least three days in a week. It rewards a habit, not a signup. PROPOSED

METRIC	WHY IT MATTERS	STARTING TARGET
Weekly active families	Shows the habit has formed	50 within 90 days of beta
Week-4 retention	Shows value after the novelty fades	Above 30% of new families
Entries per active family per week	Depth of use	At least 10
Time to first log	Ease of starting	Under 3 minutes from signup
Invited contributors per shared capsule	Drives the sharing loop	At least 1

All targets are proposed. PROPOSED

Funnel

STAGE	QUESTION	WHAT TO MEASURE	IDEA TO TEST
Awareness	Do parents know it exists?	Visits to the app and portfolio link	Short walkthrough video; posts in parent and expat groups
Acquisition	Do they create a profile?	Signup rate from visits	Open demo mode without sign-in
Activation	Do they log once and see their schedule?	Share who log within 24 hours	Pre-filled country and age; one-tap first log
Retention	Do they come back each week?	Week-1 and week-4 return	Vaccine reminders; weekly digest
Referral	Do they invite family?	Invites sent per family	Shared time capsule invitation
Revenue	Would they pay?	Willingness-to-pay answers	Test a premium plan near $4 to $6 a month

Growth loops

- Shared capsule loop: a parent invites a grandparent, the grandparent adds a letter, the parent returns to read and invites others. PROPOSED
- Country loop: a parent living abroad shares the country schedule with another parent from the same country. PROPOSED

Channels

CHANNEL	FIT	COST	FIRST TEST
Parent and new-parent groups, with permission from group admins	High	Time only	Post a walkthrough and ask for 10 testers
University and community networks of international students and families	Medium	Time only	Share with student groups that have parents
Pediatric clinics and doulas as referrers	Medium	Time, needs trust	Ask 3 for feedback, not for promotion
Short video of the country switch (US to India)	High	Time only	Publish one clip and track visits
Paid ads	Low until retention is proven	Money	Not before the beta gate

Experiment backlog

#	HYPOTHESIS	TEST	SUCCESS LOOKS LIKE
1	Showing the country switch in the first 10 seconds raises signup	Compare two landing versions	Signup rate up by 20% or more
2	A demo mode without sign-in raises activation	Offer demo account for 2 weeks	More first logs in 24 hours
3	Vaccine reminders raise week-4 retention	Reminders for half of new families	Retention up by 10 points
4	Family invitations bring new users	Prompt inviting after the first letter	At least 1 in 4 families invite someone

#	HYPOTHESIS	TEST	SUCCESS LOOKS LIKE
5	Parents will pay for shared capsule and reminders	Price test in interviews	At least 3 of 8 say yes at $4 a month

> Thresholds are proposals. Set them before each test so results are not bent afterward. PROPOSED

90-day plan

DAYS	FOCUS	OUTPUT
1 to 30	Parent research, fix onboarding, add demo mode	Findings report; demo account
31 to 60	Closed beta with 20 to 30 families; instrument events	Baseline for activation and retention
61 to 90	Run experiments 1 to 4; launch shared capsule invite	First growth read-out and go or no-go on paid plan

Tracking needed

- Events: signup, profile created, first log, log per day, guide opened, vaccine schedule opened, capsule created, invite sent, invite accepted.
- A weekly dashboard of the five metrics above.
- Privacy: events carry no health details, only counts.

Risks

- Parents are tired and time-poor, so onboarding must be very short.
- Health content is sensitive. One wrong schedule can undo trust.
- Free competitors cover everyday logging. Growth depends on the country angle and family sharing.
