Aditi Kela

Technical Program, Project and Product Management

Seattle, WA | aditikela0@gmail.com | linkedin.com/in/kelaaditi | aditi-kela.vercel.app

SUMMARY

Program and project delivery professional with 3+ years of experience across banking risk and compliance and manufacturing projects. Automates workflows, documents requirements, coordinates cross-functional teams, and builds reporting that helps the C-suite see progress and risks. Has also built applications for travel planning, clinic billing and IT support requests.

PROFESSIONAL EXPERIENCE

Grifols Biologicals **Jun 2026 - Sep 2026**

Project Management Intern, Operational Excellence *Los Angeles, CA*

- Weekly project reporting across 8 production areas was prepared by hand. Automated an Excel tracker that consolidates the reporting and flags delays and dependencies, reducing weekly preparation from roughly 1 day to 1 hour, an estimated 87% time reduction.
- Shutdown milestones spanned four functions, so slipping work was hard to see. Coordinated Quality, Validation, Engineering and Facilities on the 2026 summer shutdown and raised at-risk items for stakeholder review.
- Leadership needed one way to compare competing projects. Built a prioritization dashboard with 5 weighted scoring criteria, giving C-suite reviews a single view of priorities, progress and risks.
- Operational needs had to become testable requirements. Worked with Engineering and QA on functional requirements and design specifications, linked each requirement to testing, and standardized project documentation.
- Meeting notes were written manually. Built a Microsoft Copilot workflow connecting Excel and Word in both directions (Excel to Word and Word to Excel) that transcribes meetings and drafts minutes with action items and owners, which a person reviews before sharing.

RBL Bank **Jul 2022 - Jun 2025**

Program Manager, Risk and Compliance *Mumbai, India*

- Risk and impact assessments took at least 3 days. Automated them with generative AI while keeping regulatory guideline checks and approval controls, reducing turnaround to 3 hours, an 85% time reduction.
- The guideline rule set lived in Excel. Moved it into an automated workflow that flags applicable RBI, NPCI and international guidelines, reducing the error rate by 20%.
- The C-suite needed clear risk reporting. Built 3 Power BI dashboards and validated the underlying risk data in SQL, and automated 6 recurring reports, cutting each cycle from 2 days to 4 hours, a 75% time reduction.
- Engineering requests competed for the same capacity. Ranked them with RICE and MoSCoW and coordinated change control through production release.
- Supported the bank's mobile app version 2 launch with risk assessments, policy documentation and compliance dashboards.

SELECTED PROJECTS

HelpDesk | IT Support Request Platform | *Live prototype*

- Requests to a service desk lacked clear owners. Defined the workflow, requirements and delivery plan for a prototype where users submit requests that are assigned to the responsible team with visible status, demonstrated with sample data.

BabySteps | AI Parenting Application | Figma, Claude API, speech-to-text

- First-time parents get generic advice that ignores where they live. Designed the app in Figma and built it with the Claude API and speech-to-text so guidance adapts to the parent's country; presented at Northeastern Expo 2026. Planned next: chatbot assistant improvements.

TravelScout | Travel Planning Chatbot | *In development*

- Planning a trip across group chats is scattered. Conducted user research and scoped a chatbot for personalized itineraries, friend connections and group polls. Planned next: recommendations based on travel patterns and voice interaction.

Dental Clinic | Patient Records and Billing | Swift iOS | *Live*

- The clinic kept patient records and billing in separate places. Built a Swift iOS app that stores records, tracks returning patients and manages invoices in one app.

HACKATHON

NuCampus360 | Emerald Forge Hackathon, Northeastern University | Mar 27, 2026

- Presented an AI campus guide with chatbot functionality.

CORE SKILLS

Delivery and product: Stakeholder coordination, requirements analysis, prioritization (RICE, MoSCoW), change control, user research
Tools: Excel, Power BI, SQL, Microsoft Copilot, Power Automate, UiPath, Jira, Figma, Claude API

EDUCATION

M.S., Information Systems | Northeastern University, Seattle, WA | GPA 3.92 **Sep 2025 - Expected May 2027**

B.Tech, Computer Science | MKSSS Cummins College of Engineering for Women, India **Aug 2018 - May 2022**
